Most ABS modules do have bleeding valves, but a lot of times these aren't enough to get all the air out. Depending on where the air is trapped though will determine how hard it is to bleed the ABS module. The first thing to do to bleed the ABS module is to start the car or turn the key to where the battery is on.

The actuator on an anti-lock brake system (ABS) is known as an ABS actuator. This is an electronic device that receives a signal from the vehicle's computer to control the brake pressure so that the wheels will not become locked up. The computer monitors the signals on a vehicle's braking system several 100,000 times per second, in some cases.
