From the top menu bar of the iDRAC interface, select Configuration > System Settings. Select Remote Syslog Settings. Next to Remote Syslog, from the drop-down menu, select not disabled. Define up to three syslog server IP addresses specific to your site.

iDRAC hardening - Dell

The Intelligent Platform Management Interface (IPMI) is a standardized computer system interface used by system administrators to manage a computer system and monitor its operation. IPMI can be used to remotely power cycle a server, remotely connect to its KVM or serial interface and perform other administrative related functionalities.

Configuring IPMI interfaces

The IPMI pages show up but zero sensor data or settings show and there is no video, it was a used board and the seller refunded since at that point it was basically a dead board. It does boot with a video card plugged into a PCIe slot so I have kept it around for a spare/project where remote access is not important.
