and applied aspects of global optimization. While the focus is on original research contributions dealing with the search for global optima of non-convex, multi-extremal problems, the journal's scope covers optimization in the widest sense, including nonlinear, mixed integer, combinatorial, stochastic, robust, multi-objective optimization,

We consider the problem of finding the unconstrained global minimum of a real-valued polynomial $p(x) : \mathbb{R}^n \rightarrow \mathbb{R}$, as well as the global minimum of $p(x)$, in a compact set K defined by polynomial inequalities. It is shown that this

Global optimization is a branch of applied mathematics and numerical analysis that attempts to find the global minima or maxima of a function or a set of functions on a given set. It is usually described as a minimization problem because the maximization of the real-valued function
