Therefore, if you know a book that's not listed you can simply add the information on the site.

Man Engines Electronic Diesel Control

The mechanical fly-weight governors of inline and distributor diesel fuel injection pumps used to control fuel delivery in diesel engines under a variety of engine loads and conditions could no longer deal with the ever-increasing demands for efficiency, emission control, power and fuel consumption. These demands are now primarily fulfilled by the Electronic Control, the system which provides greater ability for precise measuring, data processing, operating environment flexibility and ...

Electronic Speed Governor. A Governor is a device which controls the energy source to a prime mover to control its power for a specific purpose. It “controls” the accelerator / engine depending on the condition of sea, meaning it automatically changes the fuel admission to maintain the desired speed or load. If parameter (s) of the loop change this will affect the entire control loop and fuel admission will automatically be corrected to maintain the desired set point.

Electronic Speed Governor - MAN Energy Solutions

The fuel injectors are pressurized and fuel oil pressure behind the Fuel Quantity Piston maintains this pressure at the injectors. As the Piston moves to the left a feedback signal is sent to the Cylinder Control Module. At low engine load the control system cuts out one of the three injection valves per cylinder.
