Veritas Cluster Server Installation Guide

In a cluster, two or more servers (called nodes) are linked in a network. These servers run the cluster software that allows each node access to the shared disks. If a node becomes unavailable, cluster resources migrate to an available node (this process is called failover). The shared disks and the virtual server are kept available.

Cluster Server (rebranded as Veritas Infoscale Availability and also known as VCS and also sold bundled in the SFHA product) is a high-availability cluster software for Unix, Linux and Microsoft Windows computer systems, created by Veritas Technologies.

Veritas Cluster Server - Wikipedia

If you installed VCS with the Global Cluster Option, the ClusterService service group contains an Application resource, wac (wide-area connector), whose attributes contain definitions for controlling the cluster in a Global Cluster environment. Refer to the Veritas Cluster Server User's Guide for information about managing VCS global clusters.
